The Cause

Every **39** Secs
someone dies from
sudden cardiac arrest²

Over 350,000 out-of-hospital Sudden Cardiac Arrests occur annually, as reported by the American Heart Association. Unfortunately only 12% of these victims survive, with barely a fraction of these who walk out of the hospital.

Mission I

Team up with at least one school in every county in New Jersey to challenge these statistics, by providing quality training to students through hands-on simulations and fun and interactive learning modules.

Mission II

Petition the State of New Jersey to amend the NJ Assembly Bill 2072, to establish a policy where high school students must submit proof of CPR training along with their Probationary Driver's Permit application.
